

6.3 FRACTION FUN!

Objective: Find fractions of a number.

Instructions

1. Generate ten 2-digit numbers in a minute by looking around the house – look at weights on packages, money on receipts or stamps, coins, people’s ages, door number etc.
2. Write each number in the middle of a piece of paper and find $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{3}$, $\frac{1}{5}$, $\frac{1}{6}$, $\frac{1}{8}$ and $\frac{1}{10}$ of each number. Some numbers will not divide equally into some fractions, so only write any that do.

Challenge

Can you find fractions like $\frac{2}{6}$, $\frac{3}{4}$, $\frac{4}{5}$ and $\frac{7}{10}$ of numbers as well? Make a note of these number sentences too, such as $\frac{2}{6}$ of 12 = 4.
